

FOLLOW OUR PATH, AS WE LEAD THE INDUSTRY

StonePeak is proud to continuously make efforts to preserve nature. Our state of the art manufacturing facility practices green measures during production which resonates throughout our green products.

The goal of our research is to use less energy and water and produce less waste. This year, we introduced a new formula created utilizing raw virgin materials which allows us to produce an "all around" USA made new greener product generation.

Features include:

- Reduced thickness to approx. 8 mm (1/3 inch)
- Recycle paper for all packaging
- Reduced average weight box
- Post-consumer recycled content of 6% for all American made products

STONEPEAK GREEN STEP SYSTEM

In order to ensure our client's understanding of our numerous products, we have developed a green path based on one, two, or three steps taken to identify a product's environmental attributes.

The green step system is based on a point evaluation for the attributes listed each being worth one point:

	3 or less points
	4-6 points
	7-8 points

SYMBOLS	ATTRIBUTE	ADVANTAGE	POINT
	Post-consumer content of 6% recycled glass	All US made materials, Bureau Veritas certified	1
	Pre-consumer content of minimum 40% recycled materials	Some materials, Bureau Veritas certified	1
	Source of raw material within 500 mile radius	All US made materials	1
	Greenguard certification	All US made materials	1
 thickness	Thickness of < 9 mm	Lighter weight material for transportation, less raw materials, energy efficient	1
	Ink Jet technology	Less waste, less glaze, energy efficient	1
	Active technology	Natural cleaning properties, dirt repellent, reduces NOx in air	1
	Non rectified / Line-cut	Less waste, energy efficient	1
